

## SERVICE BRIEF IT For Law

The legal profession has always relied heavily on the newest

### Eclipse Integrated Systems Can Provide Your Practice With Dynamic Options That Save You Money

*It's a fact that lawyers are at the center of many important decisions.*

As with many other economic sectors nowadays, technology is becoming integral for the modern law office. Whether you are a new attorney that is just hanging out your shingle, or you are a part of a multinational firm that deals in a sea of litigation, chances are you will need to consider how advances in technology will work for your practice.

For a law office, it is often not cost effective to hire a dedicated IT staff, or even an IT guy. Most law offices rely on break-fix technology companies that not only profit off your pain, they don't present the kind of value that is necessary to maintain all the newest, and most useful technology. At Eclipse Integrated Systems, we do IT differently. We provide solutions for businesses for a flat monthly rate, all the while offering the newest and most reliable technologies that work for business.

### Solutions Designed Specifically For You

*We offer hardware, software, and hosted solutions that can provide your firm with substantial value.*

No two law firms are the same, so why would you want to adhere to a technology solution that wasn't designed for your practice?

At Eclipse Integrated Systems, we offer many of the IT solutions that law offices utilize to provide superior service to their clients, including:

- **Hardware services** - We have partnered with some of the top vendors in the technology world and would be able to provide your office with the hardware you need, at an affordable price.

- **Software services** - We can provide you with software solutions to meet all of your organization's needs. Software solutions such as customer relationship management (CRM) and document management can really present a definite boost to your practice's efficiency.
- **Cloud solutions** - We know just how dynamic cloud computing can be for organizations that look to integrate mobility into their IT strategy. At Eclipse Integrated Systems, we can provide your organization with options from email to virtual computing environments to productivity suites all housed securely off-site and ready to access anytime, from anywhere.

This is just the tip of the iceberg. With our remote monitoring and management solutions as a part of your flat-rate IT service, your firm can experience optimal uptime, without the monetary outlays associated with technology. A competitive business has taken measures to protect their digital assets. Unlike your data, paper faxes and files can be destroyed in the event of a disaster, like a flood or fire. By digitizing your faxes, they can be protected and backed up by the same measures that you use for the rest of your company's IT infrastructure.

***The best solution keeps an off-site copy of your information ready to be backed up in a moment's notice.***

### Mobile Options for Confidential World

Lawyers and their associates need to be agile in the proliferation of their technology for an ever changing world.

Like many other businesses, one of the most prevalent technology issues law practices of all sizes are currently dealing with is the proliferation of mobile computing.

These mobile devices can be loaded with sensitive information and have become an important source for communication between lawyers and their subordinates in the office. The security of the data on these devices is of paramount importance as much of it is confidential client information.

At Eclipse Integrated Systems, we've got out in front of the mobile device revolution and can present your practice with solutions to manage, and if need be, remove this sensitive information off a mobile device, among other solutions that are sure to work for your organization.

Eclipse Integrated Systems' certified technicians understand the value of your organization's data and have many solutions to keep it secure.
